CONTINUATION OF FINAL REPORT OF POSTMORTEM EXAMINATION

VIII. OPINION: Based on these autopsy findings and the investigative and historical information available to me, the cause of death of this Pashtun male, (b)(6)-4 is pulmonary embolism (blood clot that traveled to the heart and blocked the flow of blood to the lungs). The patterned abrasion on the back of the left calf is consistent with the tread of a boot. The severe injury to the underlying calf muscle and soft tissue is most likely a contributing factor. The deceased was not under the pharmacologic effects of drugs or alcohol at the time of death. Therefore, the manner of death, in my opinion is homicide.
